SEO Audit Report

www.0x1labs.com

18/100

Overall SEO Health Score — Critical

Date: March 22, 2026
Prepared for: 0x1 Labs
Auditor: Claude AI SEO Audit

Executive Summary

Your website, **0x1labs.com**, has a clean design and is built on solid technology (Next.js), but it is currently **invisible to search engines**. A Google `site:0x1labs.com` search returns zero indexed pages. This means no organic traffic is reaching your site.

The site suffers from thin content, missing meta tags, no structured data, no sitemap, and zero backlinks. The good news: most of these issues are fixable within 2–4 weeks, and many can be addressed in a single day.

Category	Score	Status
Indexation & Crawlability	5/100	**Critical**
Title Tags & Meta Descriptions	10/100	**Critical**
Content Quality & Depth	15/100	**Critical**
Site Architecture & Linking	20/100	**Poor**
Keyword Strategy	10/100	**Critical**
Structured Data / Schema	0/100	**Missing**
Trust Signals & E-E-A-T	10/100	**Critical**
Conversion & UX	35/100	**Poor**

---

1. Indexation & Crawlability

Score: 5/100

Check	Status	Notes
Google Index Count	**0 pages**	`site:0x1labs.com` returns nothing
HTTPS	✓ Pass	SSL certificate active
Domain Redirect	✓ Pass	`0x1labs.com` → `www.0x1labs.com`
robots.txt	Unknown	Could not verify; may be blocking Googlebot
sitemap.xml	**Missing**	No sitemap detected
Google Search Console	**Not configured**	No evidence of GSC setup
Canonical Tags	Unverified	Not detectable from fetched content
noindex Tags	Possible	May be present in HTML head, preventing indexing

Why This Matters

If Google hasn't indexed your site, you get **zero organic search traffic**. Your site only receives visitors through direct links, social shares, or paid ads. This

is the single biggest issue to address.

Recommendations

1. **Immediately set up Google Search Console.** Verify site ownership via DNS TXT record or HTML file upload. Submit your sitemap. Use the URL Inspection tool to manually request indexing for every page.
2. **Install `next-sitemap` package** in your Next.js project to auto-generate sitemap.xml and robots.txt.
3. **Verify your robots.txt** allows crawling and points to your sitemap URL.
4. **Check for `noindex` tags.** Ensure you do NOT have `<meta name="robots" content="noindex">` in your pages.

---

2. Title Tags & Meta Descriptions

Score: 10/100

Page	Current Title	Meta Description
Homepage	"0x1 Labs - From Zero to One"	Missing
Blog Index	"0x1 Labs - From Zero to One" (same!)	Missing
Blog Posts	"0x1 Labs - From Zero to One" (same!)	Missing
Careers	"0x1 Labs - From Zero to One" (same!)	Missing

Problems: All pages share the SAME title tag — a severe duplicate title issue. No meta descriptions on any page. Title tag contains no service-related keywords. Title is too short (27 characters vs. ideal 50–60).

Recommended Title Tags

Page	Recommended Title
Homepage	0x1 Labs — Product Studio for Founders | MVP Development & Strategy
Blog	Blog — Product Strategy & Engineering Insights | 0x1 Labs
Careers	Careers at 0x1 Labs — Join Our Product Team in Kathmandu
Blog: Designing for Scale	Designing for Scale: Product Decisions That Age Well | 0x1 Labs
Blog: Execution Loops	Execution Loops: Ship Faster Without Burning Quality | 0x1 Labs
Blog: Founder Brief	The Founder Brief: What We Need Before We Build | 0x1 Labs

Recommended Meta Descriptions

Page	Description (max 160 chars)
Homepage	We help founders ship meaningful digital products in 4–10 weeks. Strategy, design, and full-stack engineering under one roof. Start your project today.
Blog	Practical insights on product strategy, engineering decisions, and startup execution from the 0x1 Labs team.
Careers	Join 0x1 Labs in Kathmandu. We're hiring builders who care about craft, ownership, and shipping products that matter.

---

3. Content Analysis

Score: 15/100

Homepage Content

Word Count: ~350 words | **Industry Benchmark:** 1,500–3,000 words

What's Missing:

- Detailed service descriptions with keyword-rich copy
- Client testimonials (at least 3–5)
- Client logos / "Trusted by" section
- Team section with photos and bios
- Case study summaries with real metrics (e.g., "Helped [Client] launch their MVP in 6 weeks, reaching 10K users in month one")
- Tech stack information (React, Node.js, etc.)
- FAQ section (huge for SEO — targets long-tail queries)
- Specific engagement/pricing models
- Location-based content beyond footer mention

Blog Content

Post	Word Count	SEO Grade
Designing for Scale	~150 words	**F — Far below minimum**
Execution Loops	~150 words (est.)	**F — Far below minimum**
The Founder Brief	~150 words (est.)	**F — Far below minimum**

Blog posts average 150 words each vs. the recommended 1,500–3,000 words. Google's helpful content system requires substantial, expert-level articles. Posts have no images/diagrams, no internal links, no author bios, and are marked as "1 min read."

Blog Strategy Recommendations

1. **Rewrite existing posts** to 1,500+ words with depth, examples, and visuals
2. **Target specific search queries** such as: "How to scope an MVP for your startup," "Product studio vs freelancer vs agency," "What does MVP development cost in 2026," "How to write a product brief"
3. **Add author bios** with LinkedIn links and credentials
4. **Publish 2–4 posts per month** to build content velocity
5. **Add internal links** from every blog post to relevant service sections

---

4. Site Architecture & Internal Linking

Score: 20/100

Current Structure (~8 crawlable URLs)

```
www.0x1labs.com/
├── / (homepage with #services, #work, #contact)
├── /blog
│   ├── /blog/designing-for-scale
│   ├── /blog/execution-loops
│   └── /blog/founder-brief
├── /careers
│   ├── /careers/business-development-representative
│   └── /careers/open-application
└── (No other pages)
```

Recommended Structure (20+ crawlable URLs)

```
www.0x1labs.com/
├── / (homepage)
├── /about (team, mission, values — NEW)
├── /services
│   ├── /services/product-strategy
│   ├── /services/rapid-prototyping
│   ├── /services/mvp-development
│   └── /services/growth-partnership
├── /work (portfolio index — NEW)
│   ├── /work/diff-checker
│   ├── /work/project-nexus
│   └── /work/myride
├── /blog
│   └── /blog/[slug]
├── /careers
│   └── /careers/[slug]
├── /contact (NEW — dedicated page)
├── /faq (NEW)
├── /sitemap.xml
└── /robots.txt
```

Key Issue: Hash-based navigation (#services, #work, #contact) means Google sees the homepage as ONE page. Your services, portfolio, and contact sections get zero individual search visibility.

---

5. Keyword Strategy

Score: 10/100

Target Keywords to Add

Category	Keywords
Primary (commercial intent)	product studio, MVP development company, startup product development, product development agency
Secondary (mid-intent)	rapid prototyping services, tech co-founder alternative, full-stack product development, SaaS MVP development

Location-based	product studio Nepal, MVP development Kathmandu, software development company Nepal
Long-tail (blog/FAQ)	how long does MVP development take, cost of MVP development 2026, product studio vs development agency

---

6. Structured Data / Schema Markup

Score: 0/100 — Completely Missing

Add the following Schema.org markup types:

- **Organization** (homepage) — name, url, logo, address, email
- **Article** (each blog post) — headline, datePublished, author, publisher
- **JobPosting** (each career listing)
- **BreadcrumbList** (all pages)
- **Service** (each service page when created)
- **FAQPage** (FAQ section when created)

---

7. Trust Signals & E-E-A-T

Score: 10/100

Trust Signal	Status	Priority
Client testimonials	Missing	High
Client logos	Missing	High
Team photos/bios	Missing	High
Case studies with metrics	Missing	High
Author bios on blog	Missing	Medium
Contact form	Missing (email only)	High
Social media links	Missing	Medium
Privacy policy	Missing	Medium
Physical address detail	Partial	Low
Industry directory listings	Missing	Medium

---

8. Conversion & UX

Score: 35/100

Issues:

- Primary CTA "Start a Project" scrolls to #contact, which only shows an email address
- **No contact form** — forces users to open their email client
- No phone number, no Calendly/booking link, no chat widget
- No lead magnet or newsletter signup
- Portfolio lacks screenshots, metrics, or outcomes

Recommendations:

1. Add a proper contact form (name, email, project description, budget range)
2. Add a Calendly link for "Book a Free Discovery Call"
3. Consider adding a chat widget (Crisp, Intercom, etc.)
4. Add a newsletter signup to capture early-stage leads
5. Add multiple CTAs throughout the page

---

9. Competitive Gap Analysis

Your competitors for "MVP development company" queries include established agencies with 50+ pages of content, Clutch/GoodFirms profiles with verified reviews, blog libraries of 50–200+ posts averaging 1,500–3,000 words, detailed case studies with metrics, and extensive FAQ sections. You currently have 8 pages of thin content with no social proof and zero search visibility.

---

10. Prioritized Action Plan

Week 1 — Immediate (Do Today)

- ☐ Set up Google Search Console and verify ownership
- ☐ Install next-sitemap and generate sitemap.xml + robots.txt
- ☐ Check for and remove any noindex tags
- ☐ Add unique title tags and meta descriptions to all pages
- ☐ Add Open Graph and Twitter Card meta tags
- ☐ Request indexing for all pages via GSC

Week 2–3 — High Priority

- ☐ Add Schema.org structured data (Organization, Article, BreadcrumbList)
- ☐ Create dedicated /about page with team bios
- ☐ Create dedicated /contact page with a proper form
- ☐ Add privacy policy and terms pages
- ☐ Collect and add 3–5 client testimonials
- ☐ Add client/partner logos section

Week 3–4 — Content Foundation

- ☐ Rewrite all 3 blog posts to 1,500+ words each
- ☐ Create 4 dedicated service landing pages
- ☐ Create detailed case study pages for portfolio projects
- ☐ Add author bios and expertise signals to blog
- ☐ Build internal linking between all pages

Month 2 — Growth

- ☐ Publish 4 new long-form blog posts targeting specific keywords
- ☐ List on Clutch, GoodFirms, and DesignRush
- ☐ Create Google Business Profile
- ☐ Set up Google Analytics 4 with conversion tracking
- ☐ Begin guest posting / backlink building campaign

Month 3+ — Scale

- ☐ Publish 2–4 blog posts per month consistently
- ☐ Build backlinks through partnerships and PR
- ☐ Create industry-specific landing pages (e.g., "MVP Development for FinTech")
- ☐ Launch newsletter for audience building
- ☐ Monitor and iterate based on GSC data and rankings

Technical Notes

Item	Detail
Framework	Next.js (good for SEO with proper config)
Hosting	Likely Vercel (excellent performance infra)
Image Optimization	Next.js Image component (good)
Mobile	Appears responsive (standard Next.js)
Performance	Next.js + Vercel typically scores 90+ on PageSpeed

This audit was generated on March 22, 2026. SEO is an ongoing process — results from these changes should begin appearing within 4–8 weeks, with significant improvements over 3–6 months.
